2.2 Selection example

Example 1: Mounting: Vertical

Maximum Speed: 500 mm/s

Overhang: 40 mm

Load weight: 0.1 kg

Refer to Graph 3 base on vertical mounting and a speed of 500 mm/s

In graph 3, find the intersection of a 40 mm overhang and load weight of 0.1 kg, which results in a selection of $\Phi 20$

Example 2: Mounting: Horizontal

Maximum Speed: 500 mm/s

Load eccentricity: 50 mm

Overhang: 30 mm

Load weight: 0.1 kg

Refer to Graph 10 base on horizontal mounting and a speed of 500 mm/s and load eccentricity of 50 mm.

In graph, find the intersection of a 30 mm overhang and load weight of 0.1 kg, which results in a selection of $\Phi 16$.

Installation and application

1. The actual loading and torque of cylinder must be less than its allowable loading and torque:

1.1 The allowable moment of cylinder

Model	Allowable torque(N.m)		
	Pitch Moment Mp	Yaw Moment My	Roll Moment Mr
EXH6	0.25	0.25	0.41
EXH10	0.95	0.95	1.49
EXH16	3.28	3.28	3.45
EXH20	6.29	6.29	6.61

1.2 When the cylinder is subjected to different type of torque, there will be different degree of shift in performance, please refer to the following table for details.

Table deflection due to Pitch Moment

Table deflection (arrow) when a load acts upon the section marked with the arrow at the full stroke of the compact slide

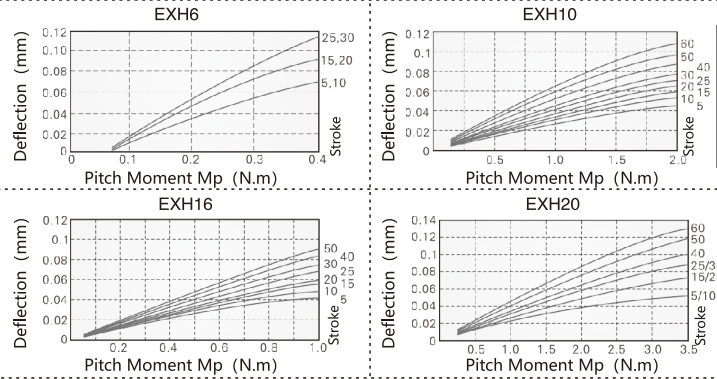

Table deflection due to Yaw Moment

Table deflection (arrow) when a load acts upon the section marked with the arrow at the full stroke of the compact slide

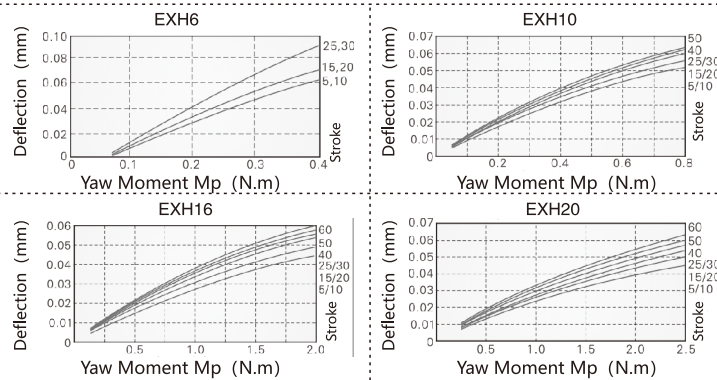

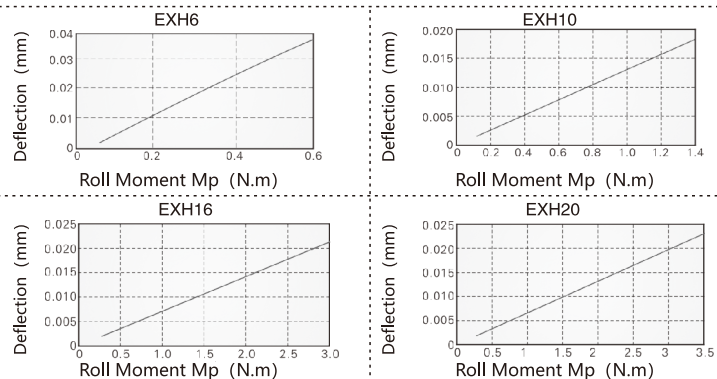

Table deflection due to Roll Moment

Table deflection (at A) when a load acts upon section F at the full stroke of the compact slide.

EXH Series Compact Slide Cylinder

Installation and Application

2. The compact slide can be piped in 3 directions. Confirm the pressure ports and operating direction. (See drawing right);

3. In compact slides with sensor switch, there is a danger of sensor switch malfunction if the mounting pitch is less than the dimensions shown in Table right. Be sure to allow at least the indicated interval.

Model	At least indicated interval (mm)	
	d	L
EXH6	5	21
EXH10	5	25
EXH16	10	35
EXH20	15	47

4. When the output of the compact slide will be directly applied to the table, it should be applied along the rod axis. (See drawing below)

5. Be sure to use a flow control valve, and adjust the speed to 500mm/s or less.
6. A compact slide can be mounted from 4 directions. Don't exceed the max. fastening torque to tighten the mounting bolts.

EXH20	M5X0.8	5.1 (Nm)	8

7. Work Piece Mounting:

7.1 Work pieces can be mounted on 2 surfaces of the compact slide. When mounting a work piece, tighten the bolts at a torque value within the limiting range.

When mounting a work piece on top of the table, do not screw the bolt deeper than the thread length in the table (See below table L), otherwise the bolt will damage the linear guide.

Front Mounting

Model	Bolts	Max. fastening torque	L
EXH6	M3X0.5	1.1 (Nm)	5.5
EXH10	M4X0.7	2.5 (Nm)	7.5
EXH16	M4X0.7	2.5 (Nm)	10
EXH20	M5X0.8	5.1 (Nm)	11

Top Mounting

Model	Bolts	Max. fastening torque	L
EXH6	M3X0.5	1.1 (Nm)	6.5
EXH10	M4X0.7	2.5 (Nm)	8
EXH16	M4X0.7	2.5 (Nm)	9
EXH20	M5X0.8	5.1 (Nm)	9.5

7.2 Since the table is supported by the linear guide, take care not to apply strong impact or large moment to the guide section.

7.3 Hold the slide when fastening work pieces with bolts, if the body is held while tightening bolts, excessive moment may damage guide section.

Hold the slide and fasten the bolt
